

Connected Construction

Jim Lynch

Vice President & General Manager, Autodesk Construction Solutions
November 2019

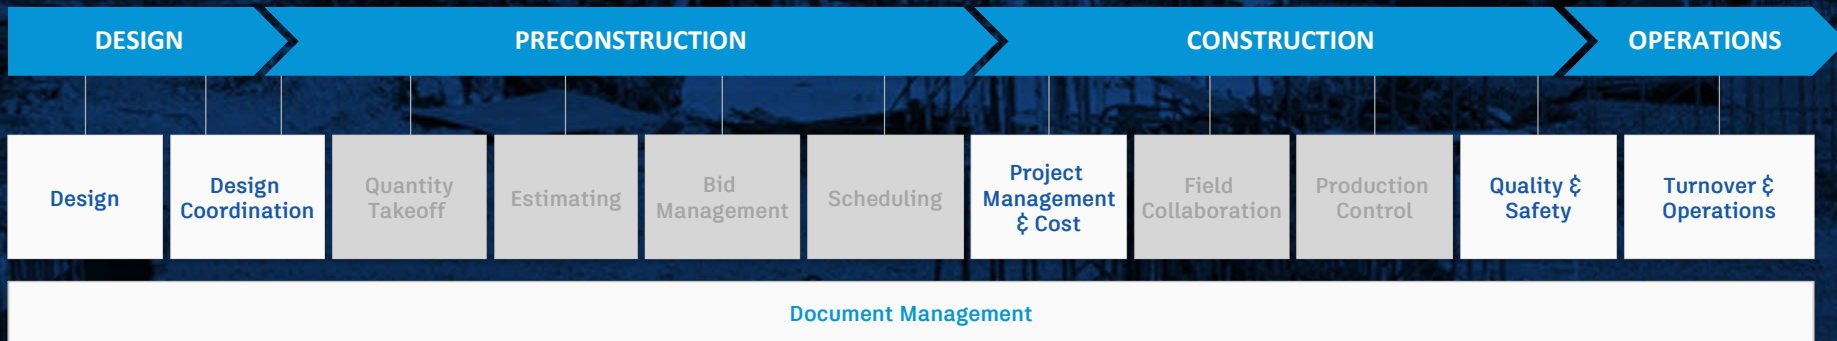

Our Mission

To help construction teams meet the world's rapidly expanding building and infrastructure needs, while making construction more predictable, safe and sustainable.

AUTODESK CONSTRUCTION CLOUD™

Advanced Technology

The tools you need for every phase of every project. Simple, yet powerful, and built to drive better decisions faster.

Builders Network

Instant connection to the best firms for every job, and the confidence to choose the right partner every time.

Predictive Insights

The power of machine-learning tuned for construction and tied to your data to find the patterns and risks that can help prevent problems, not just document them.

AUTODESK CONSTRUCTION CLOUD™

Assemble

Condition, query and connect BIM data to key workflows including design reviews, takeoffs, estimating, change and schedule management.

60,000+
models uploaded in
the last year

BuildingConnected

Save time and increase accuracy in bidding and risk management workflows with the largest crowd-sourced construction network.

~50 Million
bid invitations
sent out

BIM 360

Connect project teams and data to help reduce risk, improve quality, and deliver projects on time and budget.

~100,000
active projects in the
last year

PlanGrid

Simple, powerful construction software that empowers teams to collaborate efficiently and access the record set from any device.

30+ Million
sheets uploaded in the
last year

A blue-tinted photograph of a construction site. In the background, there are several white vehicles, including a minivan and a sedan, parked near some industrial buildings. To the right, a large yellow front loader is visible. The middle ground is filled with construction materials, including piles of dirt and debris. In the foreground, there are metal rebar structures and wooden formwork, suggesting the foundation or early structure of a building. The overall scene is busy and industrial.

Breadth, Depth, Connectivity

Background:

[Joeris](#)' diverse project portfolio includes work in the K-12 and religious markets – both highly competitive, marked by growing competition, and increasing timeline pressures.

Challenge:

Joeris was challenged with low adoption rates of the use of models during preconstruction in their markets.

Solution:

Joeris understood that using models during preconstruction results in shorter timelines, better collaboration and fewer risks downstream in construction. They strategically recognized that adding models in preconstruction workflows required a shift in staff mindset.

↓ 35%

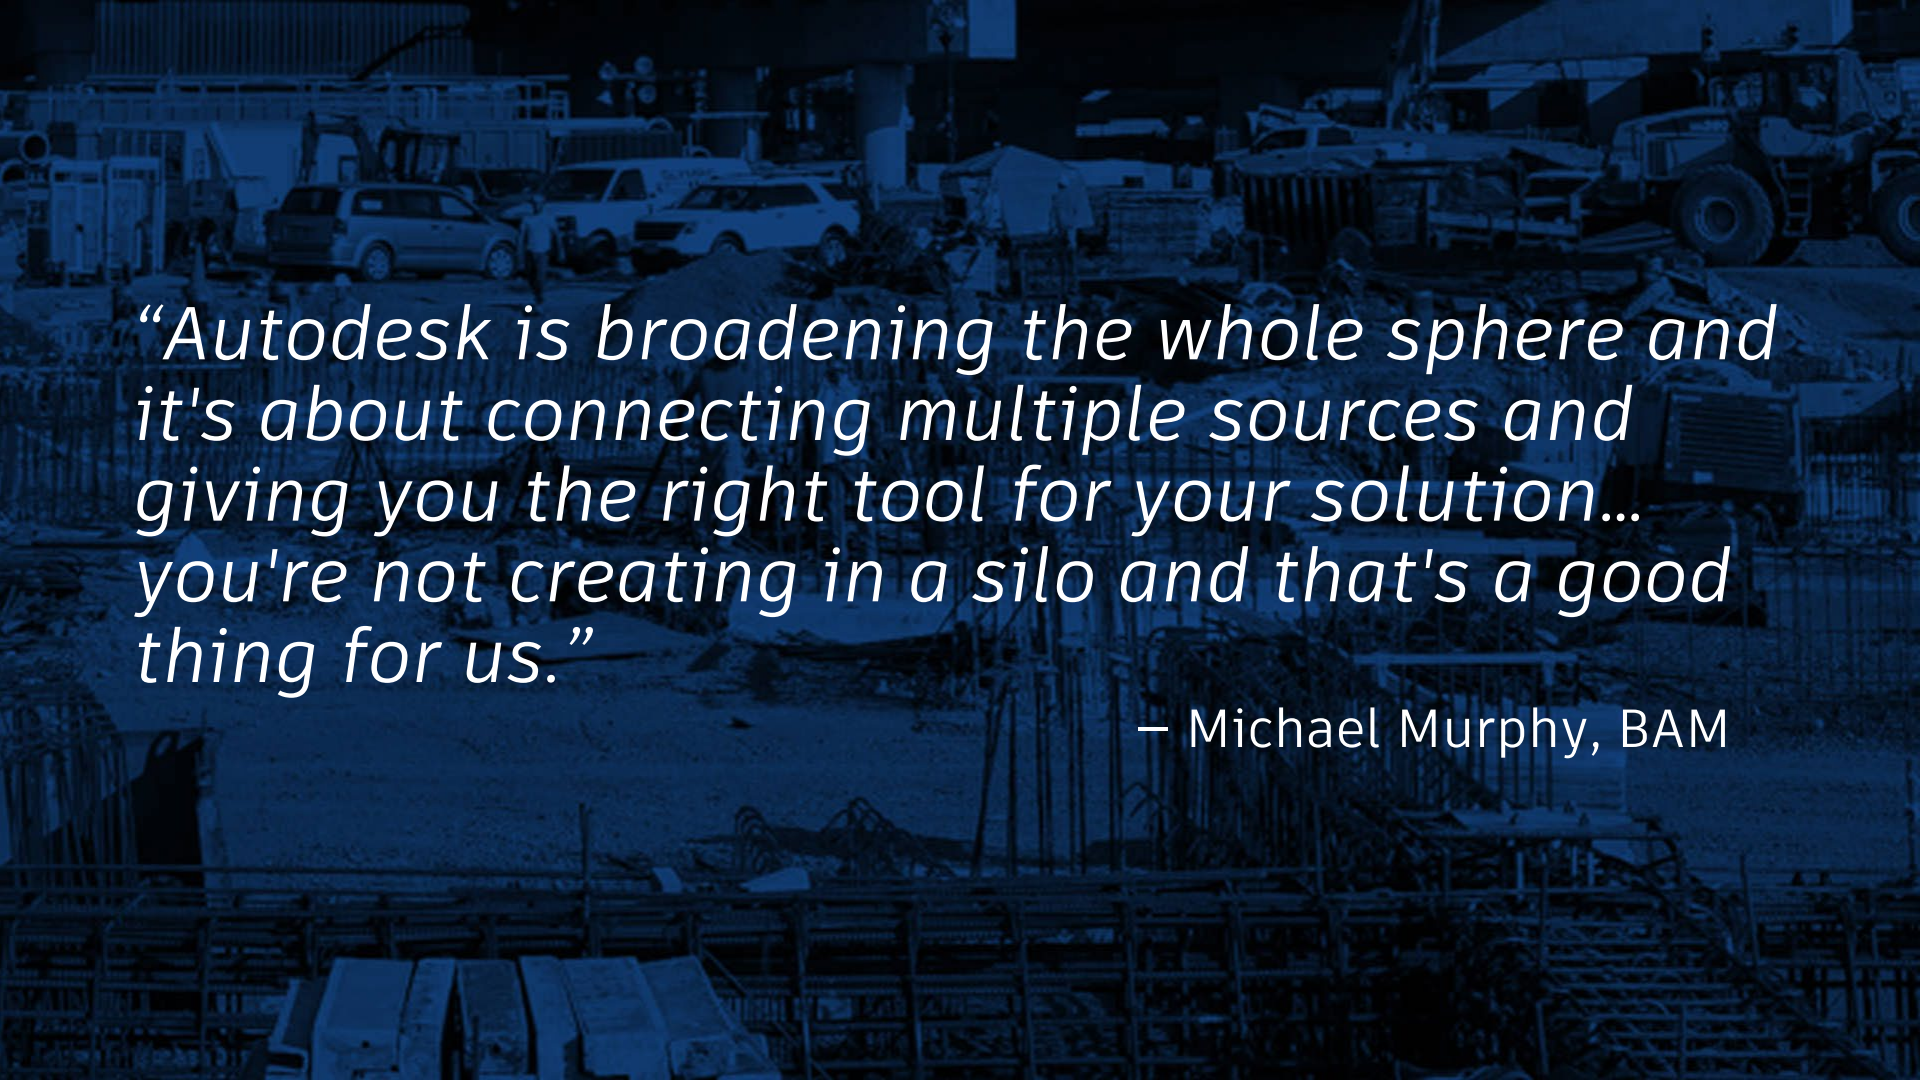

reduced takeoff time for variance
reports with reliable models

↑ 15%

improved efficiency of
estimating process

Key Features:

Assemble's 3D environment,
quantity verification, Smart
Sheets, & mobile access

A blue-tinted photograph of a construction site. In the background, there are several white vehicles, including a van and a car. To the right, a large yellow front loader is visible. The foreground shows a construction area with rebar and formwork. The text is overlaid on the left side of the image.

“Autodesk is broadening the whole sphere and it's about connecting multiple sources and giving you the right tool for your solution... you're not creating in a silo and that's a good thing for us.”
